This version uses your real ratio-level sales — no more estimates

The new sales export carries the full specification on every line — e.g. "1.5 kW 47 d/d (i=30) SP 75 / IEC 90 B14" — so sold quantity per ratio and per PAM flange is now **measured, not estimated**. 1,597 order lines parsed; net 11,715 units (returns netted, -132).

Important: total demand is higher than the first export showed. The first file summed 9,326 units; this detailed one shows 11,715 — about 26% more (biggest jumps: SP 75 = 1,318 vs 666, SP 63 = 2,395 vs 1,902, SP 40 = 2,655 vs 2,239). All coverage figures below use the higher, detailed numbers — so the situation is tighter than the previous reports showed.

The single most important finding: 16 ratio cells that sold this year have zero units inbound. Worst: SP 75 i:20 (131 sold, nothing coming), SP 90 i:100 (72 sold), SP 110 i:50 (35 sold), SP 130 i:60 and i:100, SP 110 i:10. These are guaranteed stock-outs.

Verdicts per cell: **NOT STOCKED** = sold but zero inbound · **MISSING** <5 months cover · **Tight** 5–8 · **Balanced** 8–15 · **Heavy** >15. Cover = inbound pipeline ÷ actual monthly rate (sold ÷ 7 months). Warehouse stock not included.

Demand vs supply — the two heatmaps

Top: what you actually sold per size × ratio. Bottom: what is inbound. Compare column by column — the mismatches are the story.

3 · The reorder plan — cell by cell, from actual demand

Everything under 12 months of cover, in priority order. P0 = sold this year, zero inbound — order immediately. P1 = under 5 months. P2 = 5–8. P3 = 8–12. Quantities fill each cell to 12 months of its actual rate, rounded to 5s. FOB Shanghai values.

Notes

- The 12-month plan totals 10,875 units / \$440,494 — much larger than earlier reports because the detailed sales export shows ~26% more demand (11,715 vs 9,326 units) and because it fills the mix inside every size. If one PO is too big, take P0+P1 first (\$294,262) and P2 next.
- Do not order: SP 50 i:100, SP 63 i:100, SP 90 i:40, SP 150 i:40 — all Heavy (15–50+ months).
- Combined ratios (i>100, 58 units sold) are excluded — they are assembled from two standard housings.
- Cells sold in tiny volumes (under ~5 units/year) round to zero suggested order — review manually if a customer commitment exists.
- Warehouse stock is still not included: coverage is pipeline-only, so true cover is at least what is shown. Send a per-SKU stock count to convert this into an exact stock projection.
- Assumed period: Jan 1 – Jul 30, 2026 (7.0 months). All rates scale in the Excel (Assumptions!B10) if the period differs.
- Companion Excel: SP_Ratio_Flange_Cell_Model.xlsx — 100 ratio cells, 49 PAM cells, and this reorder list, filterable, with live formulas.
